- Ventilation
- Hot and Cold Water Services
- BMS Automatic Controls
- Above Ground Drainage
- Air Conditioning
- Welding and Specialist Extract Systems
- Power and Lighting
- Structured Wiring
- Life Systems
- CCTV and Security Systems

A multi-million pound refurbishment of the Engineering and Automotive facilities at City College Plymouth was completed in partnership with Balfour Beattie Construction in September 2013, ready for the start of the new academic year.

The redevelopment included the refurbishment of the Engineering and Automotive workshops to bring the building up to the very latest standards.

Glass and aluminum have been used to open up workshops, creating open-plan workspaces where aligned disciplines have been clustered into trade-excellence areas.

Totus were employed to install the mechanical and electrical services within the area providing specialist workshop and educational service requirements to create an up-to-date modern teaching environment.

Students now have a state-of-the-art and inspiring learning environment, which meets the exacting BREEAM environmental standards for sustainable building design.
